

Quality air cleaners from Thermo Pride can remove up to 99% of airborne pollutants.

In years past, asthmatics and allergy sufferers were the customers most concerned with the need for removing pollutants from the air. Today, more and more knowledgeable consumers understand the necessity for air cleaning technology. As homes become more air-tight and energy efficient they retain common household pollutants like smoke, aerosol sprays, cleaners and other chemicals as well as dust, dirt and pollen. Quality air cleaners from Thermo Pride can remove up to 99% of airborne pollutants to improve comfort, keep homes cleaner and create a healthier home environment.

Clean Air Systems Improving the Quality for Your Health

Thermo Pride offers high quality, top of the line filters not only to improve your health by improving your home's air quality, but to also extend the life and efficiency of your forced air system by keeping the system and ducts clean.

- The Thermo Pride air cleaners are designed and sized to be compatible with most furnaces and air conditioning systems.
- Install and mount in any position with ease.
- Maintenance is as simple as a seasonal cleaning or replacing a filter pad.

Thermo Pride Electronic Air Cleaner

The Thermo Pride electronic air cleaner is a true air purifier. It cleans contaminated air by drawing air through a mesh filter to first trap large particles, then smaller particles pass through a grid of ionizing wires where they are trapped and removed from your home's air supply.

- Highly effective and cost efficient.
- Traps up to 97% of all airborne particulate as small as 0.01 micron.
- Includes a carbon air filter for odor control.
- Prefilter screen and electronic filter cell are washable and reusable and will last for the lifetime of the unit.
- The only air cleaner in the industry with a seven-year warranty on models EAC1800 and EAC2200.

Thermo Pride Media Air Filter

- Up to ten times more efficient than a standard furnace filter.
- Virtually 100% effective on particles above 10 microns, and removes air particles as small as 0.5 microns.
- Provides one of the largest filter surface areas available in a residential media filter—this means greater dust holding capacity.
- Material is made from special laboratory grade fiberglass designed specifically for maximum absorption of airborne pollution.

The Thermo Pride air cleaner cabinet will easily house either the media air filter or the electronic filter cell system. Customers can easily upgrade a media filter system by simply removing the filter pad and replacing it with an electronic filter cell.
