SUBJECT: Beckett Genesis Control Contractor's Tool

Beckett Genisys controls come in preprogrammed in A (no pre or post purge) B (pre purge only) or P (pre and post purge) configurations.

One great feature of the Genisys is, with the contractor's tool, the programming can be changed. You can add or remove pre and post purge settings. You can also change the timing of the purge cycles. The pre-purge can be from 0 to 45 seconds; the post-purge can be from 0 to 8 minutes. This is true with all Genisys primarily controls.
