

SUBJECT: Beckett Burner w/Honeywell R7184, Pump Purge

The Beckett burners with Honeywell R7184 Oil Primary Control has many features. One that is often overlooked is the pump purge feature. When in Mode 1, pushing the reset in the “Trial for Ignition” stage will allow the burner to run for four minutes straight. This gives you plenty of time to bleed the fuel pump. The ignition also switches from interrupted to intermittent so when oil gets to the burner it will light right away.
