## SUBJECT: OME Replacement Primary Control

This notice only involves service parts for the OME Beckett AFG Burner. Has no effect on the production burner that is shipped with the furnace. Recently, it was discovered that the Programmable Honeywell Primary Control R7284, provided in AOPS7739 will not fit on the OME Burner due to an interference with the clean out tube and plug. Again there is no problem with the fit of the Genisys Primary Control that is shipped on the burner.

Thermo Products made a decision several years ago to use the R7284 Honeywell Primary control as a replace part for all Genisys controls that utilized a Post Purge. This eliminated the number of different primary controls that we would need to stock. The R7284 is field programmable so the dealer could program the control to his specific needs so only one control was needed. With the Genisys control it could be reprogrammed but the Dealer needs the contractor tool to reprogram.

The OME furnace was the first Mobile Home furnace that utilized the external clean out tube and also has a 2 min post purge. Due to the size of the vestibule, space is limited and the R7284 will not fit on the burner junction box because of the clean out tube being in the way. Therefore we will stock the Genisys R7505P-152M control, Thermo Pride Part# 380207 as a field replacement.

Please pass this information on to your Dealers that use the OME furnace. Also if they have purchased OME Parts Kits, AOPS2690, they will need to exchange the Primary control, part # AOPS7739 for the Genisys R7505P-152M, Thermo Pride part# 380207. These controls should be in stock by the first of April.

Should you have further questions, please contact Thermo Pride Technical Service at 1-800-348-5130.
